

QuietKey Gate A Bridge Run · Campaign Log

bridge-log-01 · production-format recipe pages under boundary damage · one row = one physical sheet, printed, treated, photographed, decoded. Page: the frozen production recipe page (sheet page 2, single T5 footer, ground truth spike/tokens.json). TEST TOKEN ONLY.

Before any session: print 19 copies of the recipe page at 100% from desktop (never fit-to-page) plus 4 spares, all on the same printer and paper stock as the spike. Scale check on the first sheet of every batch: footer line 2 (48 characters) measures approximately 77 mm wide; footer line 1 approximately 138 mm; tolerance 2 mm, otherwise the print scaled and the batch is discarded. Write the Sheet ID in pencil on the top-right corner of each sheet. One treatment per sheet. There is no in-sheet control token on production pages: the two pristine controls S28 (session start) and S46 (session end) are the session-quality gate. If either fails to decode, the session (light, focus, print), not the damage, is at fault: reshoot the session. Capture (std): bright even indoor light, phone flat and straight-on, full resolution, original file (no messenger compression), JPEG. Extra lighting arm, no extra paper: re-shoot S28 as bridge-baseline-0-dim-S28 and S40 as bridge-scuff-3-dim-S40 under dim light. Scoring (harness): per character, correct / detected erasure / silently incorrect; per token, RS-corrected error bytes / erasure bytes / decode success / unrecoverable; per sheet, NEW first-class outcome: footer located yes or no.

ID	Treatment	Sev.	Specification (apply to the single T5 footer unless stated)	Capture filename	Prt	Trt	Shot	Decode result / notes
S28	Baseline (control)	0	Pristine. No treatment. Photograph at session start.	bridge-baseline-0-std-S28				
S29	Coffee ring	2	Full wet ring crossing TWO lines of the footer block; air-dry.	bridge-coffee-2-std-S29				
S30	Coffee ring	2	Replicate of S29.	bridge-coffee-2-std-S30				
S31	Crumple & flatten	2	Tight ball; flatten under a heavy book.	bridge-crumple-2-std-S31				
S32	Crumple & flatten	2	Replicate of S31.	bridge-crumple-2-std-S32				
S33	Water	2	Wet streak across the footer block, smeared once with a finger.	bridge-water-2-std-S33				
S34	Water	2	Replicate of S33.	bridge-water-2-std-S34				
S35	Water	3	Soak the footer zone ~10 s; air-dry (cockling expected).	bridge-water-3-std-S35				
S36	Water	3	Replicate of S35.	bridge-water-3-std-S36				
S37	Crumple & flatten	1	Loose crumple into a ball; flatten by hand.	bridge-crumple-1-std-S37				
S38	Fold / crease	3	Three accordion folds through the footer zone; flatten.	bridge-fold-3-std-S38				
S39	Scratch-out	3	Blade scrape removing paper surface across ~25+ footer characters.	bridge-scratch-3-std-S39				
S40	Scuff / abrasion	3	Sandpaper, aggressive; heavy ink loss across a band of the footer.	bridge-scuff-3-std-S40				
S41	Fade (low contrast)	3	Rub the footer zone until characters are faint / ghosted.	bridge-fade-3-std-S41				
S42	Edge / obstruction	3	Tear or punch a hole through the middle of the footer block.	bridge-edge-3-std-S42				
S43	Locator stress: body ring	1	Full coffee ring on the last body paragraph, lower edge within ~10 mm of the footer but NOT touching any footer line; air-dry.	bridge-bodyring-1-std-S43				
S44	Locator stress: clip tear	1	Tear off the lower-left corner clipping the first ~10-15 characters of footer line 1 (the URL-prefix region). Footer lines 2-3 untouched.	bridge-cliptear-1-std-S44				
S45	Locator stress: span stain	1	Coffee puddle spanning the gap between the last body line and footer line 1, touching both; air-dry flat.	bridge-spanstain-1-std-S45				
S46	Baseline (control)	0	Pristine. No treatment. Photograph at session end.	bridge-baseline-0-std-S46				

Prt / Trt / Shot = tick when printed, treated, photographed. Severity specifications S29-S42 are copied verbatim from the spike campaign log (adapted only from "each target token" to "the footer block") so results are comparable cell-for-cell. S43-S45 are new locator-stress conditions that exist only on production-format pages: decoy body ink, URL-prefix truncation, and body-footer line merging. They are exploratory by pre-registration (bridge-prereg-01). Boundary sev.2-3 failures are expected and informative; the pre-registered pass conditions gate failure MODE, not failure rate.
